

## **We Found Ecology (Sun Soil Water Air)**

(sung to Rhianna "We Found Love")

Yellow sunshine in the sky,  
shining bright from way up high.  
As its shadow crosses mine;  
it's what we need to come alive.

### CHORUS:

Abiotic factors we just can't deny;  
We need them all to grow.  
Sun, soil, water, air  
gives life to all things here.  
Sun, soil, water, air:  
four factors we must share.

Soil makes up the forest floor.  
Its nutrients plants do adore.  
It looks like dirt but it's divine.  
It's what we need to come alive.

### CHORUS

Lakes and streams are water's place.  
Living things all need a taste.  
Without rain the world is dry.  
It's what we need to come alive.

### CHORUS

Look around you everywhere;  
we're surrounded by good, clean air.  
Breathe it in it's mighty fine.  
It's what we need to come alive.

### CHORUS
